DM7212

AW2023

This project has got inspired by Luffa plant. Luffa is cultivated and eaten as a vegetable, but must be harvested at a young stage of development to be edible. When the fruit is fully ripened, it is very fibrous. The fully developed fruit is the source of the loofah scrubbing sponge which is used in bathrooms and kitchens. the sponge is used as a body scrub in the shower.. Loofah vines are large aggressive climbers with coiling tendrils and unisexual yellow flowers. The oblong fruits are greenish when young and become straw-coloured with a brittle rind when mature

I tried to use Luffa's leaves, flower, climber, sponge and its microscope as inspiration for my designs. I also tried to repeat the same language in all my designs. I also added tape with Zig Zag stitches as the representative of the sponge texture on the edges. Moreover, the color scheme comes from Luffa plant itself
